

Research topic and problem

Prof. Dr. Narongrit Sombatsompop

Polymer **PRO**cessing and **Flow (P-PROF)** Group

*King Mongkut's University of Technology Thonburi (KMUTT)
91 Pracha U-tit Rd., Bangmod, Thuang-khru, Bangkok 10140, THAILAND*

What are differences between NEW and Novel?

NEW is another form of material that may/ may not be the same as the existing material.

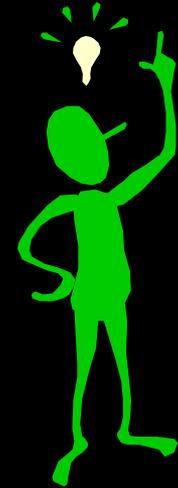

NOVEL is another type or form of material that is completely different from the existing one.

Characteristics of a research topic (Topic aim)

- 1. Novelty (Mat./Prop./Proc./Appli.)*
- 2. Easier & simpler method and techniques*
- 3. More advanced techniques (more accurate and reliable)*
- 4. Agreement or disagreement between theory or/and practice*
- 5. Leading to more applications (cheaper and more versatile)*

NOVELTY may be in the form of

- 1. Novel materials*
- 2. Novel apparatus*
- 3. Novel method and conditions*
- 4. Novel results*
- 5. Novel explanations*
- 6. Novel conclusion*

Ways for the research idea (topic) to go: (Topic preparation as aimed)

- 1. Describing novel materials, design, operational method and conditions.*
- 2. Reporting experimental results that have never been found/discovered before.*
- 3. Presenting a comparison between your own results with those obtained from other research work.*
- 4. Comparison between experimental and theoretical*
- 5. Following all related effects on changes of the results found.*

Processes to find possible topics? (Topic procedure)

- *Considering journal papers, review papers, webs and books?*
- *Reading papers and summarizing them. (how to read them quick?, but not to miss important parts).*
- *Finding highlights (selling points) and shortcomings?*
- *Going through papers from present to past? (tips: using references of the read papers).*
- *Following the same research group (s) to grasp the main ideas and deciding which ideas to follow or to compete with?*

Processes to find possible topics? (cont.)

- *Listing possibly further works for each paper.*
- *Considering the similarities and differences across different research groups.*
- *Grouping the similarities.*
- *Prioritizing the most frequent similarities for further the work.*
- *Writing the proposal. (this is the most important part, sometimes, you will know how terrible the idea until the words are in writing).*

A good research topic (Topic conclusion)

1. *To create an originality.*
2. *To improve for a better life.*
3. *To erase the existing for competitiveness.*
4. *To correct for the right (or to repeat for re-confirmation)*
5. *To modify for more versatilities, useful, and wider applications (more appropriate and higher tech.)*
6. *To compare for establishing a next creation.*
7. *To analyze and explain for deeper knowledges.*

*How difficult you describe the
problem = how hard you can solve*

A good research needs a creative researcher
